Goldstone Infratech gets first order for pure Electric Buses

Goldstone Infratech Ltd has received its first order for supply of six (6) **pure Electric Buses** to The Brihanmumbai Electricity Supply and Transport Undertaking (BEST), Mumbai.

BEST is the civic transport and electricity provider public body based in Mumbai. This will be the first time BEST will run Electric buses in Mumbai. The buses will be environment friendly, running fully on batteries and reduce sound & air pollution. The electric bus will run for 180 km on a single charge.

BEST has been fully conscious of the alarming levels of pollution in cities. With modern and reliable technology, BEST has been making constant efforts not only to keep pollution level under control, but minimize it. Electric buses help in promoting public transport by providing superior customer experience with lower noise and zero emission to lower PM 2.5 pollution levels in the cities. In addition, with increasing Suburban Commuter traffic both on Central and Western Railways, these Electric buses, with faster acceleration and braking, shall contribute in a significant way to evacuate this traffic. Electric buses are also a step towards energy security for the country by saving diesel. Keeping these in view, BEST has now decided to introduce pure electric buses.

Goldstone shall be assembling these buses in India in tie up with BYD Auto Industry Co, Ltd, China. The bus body will be fully built in India.

Goldstone and BYD have completed trials of Midi electric bus in Manali-Rohtang pass. This is the first time any Electric bus has been used at that altitude of over 13,000 ft and at such steep gradient anywhere in the world.

About BYD

BYD is the largest manufacturer in the world for pure Electric vehicles including electric buses. BYD Company Limited ("BYD"), the parent company of BYD Auto, a public listed company, is one of the top 500 Chinese Enterprises specialized in IT, automobile, new energy and light rail. Founded in February 1995, BYD started out with rechargeable battery business, and entered the automobile industry in 2003. Currently, BYD is the world's only automaker that has its own technologies and manufacturing capabilities for batteries, electric machinery, electric control, charging infrastructure and automobile production. BYD's electric vehicles have been sold to 200 cities across 48 countries and regions in 6 continents around the world.
